Hand-made Work

Hand-Making of Ceramic

With the development of science and technology, today's ceramic production technology has undergone tremendous changes, ceramic production technology continues to innovate and upgrade, but traditional handicraft technology still occupies an important position in ceramic art creation and production.

Mould-forming technology has been widely used in the production of modern ceramics.Workers use gypsum moulds to produce ,pour the mud into the moulds. According to the working procedure, most of mud in the mould is poured out successively. When the mud embryo of the mould is dry enough, the demoulding begins. At this moment, the complete ceramic embryo was produced.

After that, the most important step, manual repairing, began. After demoulding, because the surface of the ceramic body is not smooth, there are rough edges at the edges, and some of them still have die seams or slurry, so it needs to be further processed and trimmed, which is called manual repairment. Repairing is one of the most important processes in ceramic forming. Its main purpose is to make the surface of the ceramic more smooth, coherent and uniform. It is the key step to determine the perfection of the ceramic.

Embryo repairing depends on the experience and handicraft skills of embryo repair workers. Experienced technicians can clean the surface debris of the body, repair the pinholes and cracks on the surface of the ceramic embryo, and smooth the mold marks by repairing the embryo. Before glazing and firing, the ceramic embryo is repaired to a more perfect state, so as to improve the perfection and yield of finished ceramics.

Because of this, although with the help of mould, the production of ceramics still has a special manual personality, each product is unique in detail, different, not perfect enough. This is also the unique charm of ceramics.

SUBJECT

Lighting is not only a kind of illumination, but also a lifestyle. We are working hard and never stop to bring the creative idea into our lighting.

Function

At the present stage, lighting has not only played the role of lighting and decoration, but also has more different functions waiting for us toexplore in daily life.

Kids

Children's world is full of sweetness and imagination. Lighting can make our children retain a sense of innocence while lighting.

The surface of the ceramic base is smooth on the abdomen, and there is a hand-made-line texture on the outside.

The combination of these two features makes the ceramic base have a paradoxical aesthetic feeling.

And the fracture surface makes the ceramic base more interesting.

This ceramic desk lamp is designed to combine automatism and stillness.

The lower part has a spiral concave and convex surface, the upper part is smooth surface, the division of electroplating and colored glaze can better highlight two different feelings.

The hollow-out design of this series of lamps is inspired by Christmas Eve.

On Christmas Eve,the fireworks and shooting stars reflected off each other.The snow-covered world plays with the Christmas tree.

White transparent porcelain with various popular patterns.

Simple, elegant, easy to clean.

The combination of tradition and fashion makes this table lamp suitable for lighting and decoration in home life.
